PRESS RELEASE

videoNEXT Announces SKM-Mobile™ for Apple's iPhone

Chantilly, Va. – September 12, 2008 – videoNEXT, a technological leader of physical security information management (PSIM) solutions, today announced the availability of its wireless video surveillance solution, SKM-Mobile™, utilizing the Apple iPhone. Offering its proven video surveillance application, Security Knowledge Manager™ (SKM™), on the iPhone device provides organizations with video monitoring and increased responsiveness no matter where they are located.

“There are no other solutions in the security space as comprehensive as our video surveillance application and available on Apple's iPhone,” said Ryan Kaltenbaugh, director, Global Business Development for videoNEXT. “The iPhone is an ideal mobile platform for viewing surveillance video and is nothing short of ground breaking for the security space. Our SKM-Mobile solution is available on multiple mobile platforms and we are thrilled to now be able to offer it on the popular iPhone.”

“videoNEXT has again produced a great security application now utilizing the iPhone to offer security professionals,” said Tony Padilla, CEO for a videoNEXT systems integrator, Secure Integrator. “With the availability of videoNEXT's innovative wireless video surveillance offering on the iPhone, the market potential has expanded to a much wider audience.”

SKM-Mobile enables organizations to increase the responsiveness of their surveillance system by providing the ability to monitor and control cameras and receive alarms all from a PDA or mobile phone working on Windows Mobile version 5 or 6 and now Apple's iPhone. SKM for the iPhone is a user name and password protected application that incorporates advanced video analytic technology to send alarms/alerts to the iPhone when user-defined events occur. It also provides users the capability to playback recorded and archived video on their iPhone.

videoNEXT's SKM is an open, standards-based software solution that works with nearly any IP, digital or analog camera, runs on any Intel or compatible server and uses an organization's existing security and data infrastructure in new and powerful ways. It provides the easiest and most scalable IP surveillance and physical security information management solution available today. Combining this with full policy-level administration and its unique flexible high availability Storage Volume Manager – organizations now have a highly capable, powerful, scalable and easy-to-use physical security information management tool that truly synchronizes security.

About videoNEXT

videoNEXT is a founding leader and developer of Physical Security Information Management (PSIM) solutions for commercial, government and military sites with installations worldwide. The company's flagship software, Security Knowledge Manager™ (SKM™), is a true, open PSIM platform designed to synchronize an organization's security information into a single, user-friendly and manageable solution. SKM leverages a classical IT approach to video and sensor content management for capturing, organizing, storing and displaying video and sensor data. The growing SKM-family of enterprise-class products includes: v-AC access control module, v-MX video display offering, v-IQ video analytics and SKM-Mobile wireless solutions. Founded in 2002, the company is headquartered in Chantilly, Va. For more information on videoNEXT, visit www.videoNEXT.com or call 866.723.3077.
